SUBJECT INDEX

Acetate thiokinase (EC 6.2.1.1) histone acetylation and 91
Acetyl-CoA from L-leucine in islets 209
Acidosis on urea synthesis 173–175
Acini
  distribution in liver 160, 162
  functional implications of synthetic role 165
  metabolic zonation and 160
Acivicin inactivation of synthase II 65, 67
Aclacinomycin A (ACM)
  differentiation induction in HL-60 514
  on transferrin receptor activity 515
Acrolein from hydrolysis of 4-OH-CP 113, 114, 119
Actin
  from non-muscle cells 297
  interaction with enzymes of carbohydrate metabolism 297–304
  polymerization and enzyme regulation 302
F-Actin
  activation of glyceraldehyde-3-phosphate dehydrogenase 298
  cytoskeleton function 297, 303
  glycolytic enzymes and 298
  –lactate dehydrogenase complex 299–301
  on carbohydrate metabolism enzymes 302
  on cellulases 301
  on endoglucanases 301
  polymeric structure 297
G-Actin relation to F-actin 297, 299, 303
Actinomycete ATCC 39365, 2′-chloropentostatin from 125, 137
Actinomycin
  on L1210 and B16 cells 142
  on liver synthase II levels 73, 75, 76
Actomyosin isolations 297
ADP
  activation of α-KgD 367
  on cytosol 5′-nucleotidase activity 186
    protection 190, 193
  on glutamate dehydrogenase in islets 210
ADP reductase *see also* Ribonucleotide reductase
  assay 4
  guanine nucleotide analogs on 13–15
Adenine N-3 alkylation
  by CC-1065 144
  by CC-1065 analogs 149, 151
Adenosine
  as adenosine deaminase substrate 127
  on cytosol 5′-nucleotidase activity 186
  potentiation of growth inhibition and 132–135
Adenosine deaminase (EC 3.5.4.4)
  assay 127
  in salvage pathway 125
  inhibition 125–138
    by 2′-chloropentostatin 125, 128, 129
    by coformycin 125, 129
    by dipyridamole 128, 129
    by pentostatin 125, 128, 129
  inhibitors on cell growth 132–134
  reactivation after inhibitor binding 130, 131
  substrate saturation kinetics 127
  turnover numbers 132
Adenosine nucleoside derivatives, effectors of ribonucleotide reductase 10–13
Adrenalectomy on phenylalanine and tyrosine metabolism 321
Adrenergic agents on phenylalanine hydroxylase 313, 314
  antagonism of effects 315
Adriamycin (ADR)
  induced DNA strand breaks 449, 453
  inhibition of protein kinase C 394
  on L1210, B16 and CHO cells 142
  on transferrin receptor activity 515
  on WEH1 3BD$^-$ cells 514
α-Agonists on phosphorylation and phenylalanine hydroxylase activity 313–315
β-Agonists on phosphorylation and phenylalanine hydroxylase activity 313–315, 323
Alanine
  on hepatic proteolysis 270, 272, 273
  on insulin release 211
  transamination in islets, subcellular location 206
Alanine aminotransferase periportal localization 162, 167
Aldehyde dehydrogenase (EC 1.2.1.3) on activated CP 104
Aldolase
  F-actin binding 298
  F-actin on 302
  activation 298
Aldophosphamide

from CP 103
from 4-OH-CP 110
structure 100
Alkaline phosphatase (ALP, EC 3.1.3.1)
assay 282
in basophilic tumors 286
Alkalosis on urea synthesis 174, 175
Alkyl-lysophospholipid inhibition of protein kinase C 391–394
Allosteric regulation of ribonucleotide reductase 3–17
2′,(3′)-AMP
as substrate for cytosol 5′-nucleotidase 185
on cytosol 5′-nucleotidase activity 186
5′-AMP
as substrate for cytosol 5′-nucleotidase 182, 185, 188, 192
DNA-polymerase inhibition and 114
cAMP
activation of protein kinase 41, 55
on cytosol 5′-nucleotidase activity 186
cAMP-dependent protein kinase (EC 2.7.1.37)
alanine MBP peptide on 391
phosphorylation of phenylalanine hydroxylase 41, 46, 50, 54, 55, 57, 61, 310, 312, 315, 319, 323
polyamines on 411, 412, 415
substrate specificity 388
cAMP phosphodiesterase (EC 3.1.4.17) on 4-OH-CP 113
5′-dAMP as substrate for cytosol 5′-nucleotidase 185
α-Amanitin on RNA polymerase activity in MEL nuclei 426, 427, 434
Amastatin on chymase and tryptase 245
Amidophosphoribosyltransferase (EC 2.4.2.14) inhibition by purine nucleotides 197
Amino acid aminotransferase in islet homogenates 204, 205
Amino acid *see also* Branched chain
concentration on protein degradation rates 260, 263
deficiency on rat liver 259
levels on vacuole appearance 260–263
regulation of proteolysis 257–274
specificity on proteolysis 267–273
2-Amino-bicyclo(2,2,1)heptane-2-carboxylic acid *see* BCH
5′-Amino-2′-5′-dideoxythymidine (5′-AdThd)
deinhibition of thymidine kinase 21, 27–29
on IdUrd cytotoxicity 26
on IdUrd uptake 25, 27
stimulated dTdr uptake, methotrexate on 31
Aminoglycoside antibiotics
on protein kinase reactions 412, 413
polyamine-like properties 404
8-Aminoguanosine on thiopurine induced differentiation 519
2-Amino-4-hydroxy-6-[1,2-dihydroxypropyl-(L-erythro)-pteridine] *see* Biopterin
Aminooxyacetate on islet amino acids 206
Ammonia metabolism, hepatic 159–177
pH on 175
Ammonium
detoxication pathways 163, 170, 171
bicarbonate consumption and 173
in damaged liver 165, 166
ions
excretion from kidney 173
on glutamine cycle 168–170
ureogenesis and 170–172
Androgen status and polyamine-stimulable protein kinases 406
Anthracycline antibiotics, leukemia cell differentiation and 513, 515
Antibiotic CC-1065 *see* CC-1065
Antichymase $F(ab')_2$
inhibition of chymase 245
inhibition of histamine release 246, 247
mechanism 247, 248
α-Antichymotrypsin
on chymase and tryptase 245
on histamine release 246
Antiestrogen inhibition of protein kinase C 392, 393
Anti-insulin serum on liver synthase II levels 74, 75
Antineoplastic agents as inhibitors of protein kinase C 394
Antipain inhibition of chymase and tryptase 244, 245
α-Antitrypsin on chymase and tryptase 245
Antitumor
alkylating agents on histone acetyltransferase 87–96
antibiotics protein-associated DNA breaks and 448
Aprotinin
on chymase and tryptase 245
on histamine release 246
Ara AMP *see* Arabinosyladenine
Ara C on B16 cells 142
Arabinosyladenine (ara-A, vidarabine)
as adenosine deaminase substrate 127
phosphate in combination chemotherapy 134, 136, 137
potentiation of growth inhibition and 132–135

Arginine residues
in α-KgD 366
2,3-butanedione modification 367
in PDH active centres 352–356, 364
modification 349, 353
Argininosuccinate synthase (EC 6.3.4.5)
localization 162
Asparagine
metabolism of leucine in islets and 214
on hepatic proteolysis 267
on oxidation of ketoisocaproate 214
Aspartate carbamoyltransferase (ACTase, EC 2.1.3.2)
in multienzyme complex 65, 67
UTP synthetic pathway and 66
ASTA Z7557 *see* 4-Sulfonatoethyl-thiocyclophosphamide
ATP
on cytosol 5′-nucleotidase 186–188
allosteric activation 190, 192
inorganic phosphate and 188–190
protection 190, 193
on PK-N1 and PK-N2 409, 410
on protein phosphatases 407
protection of ribonucleotide reductase 7
substrate for cytosol 5′-nucleotidase 182
dATP
inhibition of ribonucleotide reductase 10–12
on cytosol 5′-nucleotidase activity 186
Autophagy, amino acids and 259–263
Azaorotate inhibition of OPRT 67

Bacterial SOS response 485
Bacteriophage φX-174RF, CC-1065 and analogs binding sites 151
BCH (2-amino-bicyclo[2,2,1]heptane-2-carboxylic acid)
glutamate dehydrogenase activation and 205, 210, 212
on CO_2 production in islets 212, 213
β-cell insulin production and 203
Bestatin on chymase and tryptase 245
Bicarbonate removal, role of liver 172, 173
Biopterin 37 *see also* Tetrahydrobiopterin
Bladder cancer, human cell lines
cell doubling times 27
culture 23
HT1197 23, 25–27, 29–31
IdUrd cytotoxicity 5′AdThd on 26
IdUrd uptake 5′AdThd on 25, 27
T24 23, 25–28, 31
thymidine kinase 5′AdThd on 28–30
dTTP pools 31
647V 23, 25–27, 31
Blood sugar levels, phenylalanine hydroxylase regulation and 55
Bovine
factor X 242
activation of prothrombin 249–251
kidney BCKDH phosphorylation and inactivation relations 230–233
MBP *see* Myelin basic protein
Branched chain amino acid metabolism
in pancreatic islets 203–216
portal blood levels and BCKDH 235
tissue interrelationships 226
Branched chain α-ketoacid dehydrogenase complex (BCKDH), (EC 1.2.4.4 + dihydrolipoamide acyltransferase + EC 1.6.4.3) regulation 219–235
activation by phosphoprotein phosphatase 223
activity state 219
diet protein on 223–225, 228, 234
starvation on 226, 227, 234
assay 220, 221
covalent modification 232
flux through 220, 227
from various sources 230
in islets 207
maple syrup urine disease and 225
on pyruvate dehydrogenase assay 229, 230
phosphorylation site and inactivation 230–234
stimulation 229
trypsin digestion 221
Branched chain α-ketoacid dehydrogenase kinase
assay 220, 221
inhibitors of 219, 222, 234
relation to BCKDH 234
Branched chain α-ketoacids stimulation of BCKDH 229 *see also* individual ketoacids
Bromopyruvate protection of PDH 355
N-Bromosuccinimide (NBS) modification of tryptophan residues 349
2,3-Butanedione
inactivation of α-KgD 365–367
inactivation of PDH 353, 356
modification of arginine residues 349, 367
Butylphenyl deoxyguanosine triphosphate (BuPdGTP) on ribonucleotide reductase 13–15

Ca-dependent protein kinase in phenylalanine hydroxylase phosphorylation 323
Ca-ionophore A23187
histamine release 246, 247, 252, 253

on phenylalanine hydroxylase phosphorylation and flux through 313, 314
Calf thymus poly(ADP-ribose) synthetase from 380
Calmodulin-dependent protein kinase
phenylalanine hydroxylase phosphorylation and 313
replacement for reductase kinase 331
Calpain-II (liver)
inhibition 336
proteolysis of HMG CoA reductase 335, 336
Calpastatin (liver) inhibition of calpain-II 336
Carcinogenesis, genetic stress response and 499, 500
Carbamoyl-phosphate synthase I (CPS I, ammonia, EC 6.3.4.16)
acidosis on 174
localization 65, 162
urea synthesis control and 163, 170
Carbamoyl-phosphate synthase II (CPS II, glutamine hydrolyzing, EC 6.3.5.5)
regulation 65–82
in hepatomas
autonomy of activity 81
increased amount 70, 71
purification 68
starvation and diabetes on 80
synthesis rates 78
transformation- and progression-linked increase 70
turnover rate comparison with liver 72, 78
in rat liver
actinomycin on synthesis 73
anti-insulin serum inhibition 74, 75
catalytic properties 65, 66
degradation rates 79
immunotitration of 76, 77
in diabetes 75–77, 78–80
inactivation by acivicin 65, 67
PRPP activation 66
purification 68
regulation by insulin 73, 75, 78–80
regulatory properties 65, 66
starvation and refeeding on 73, 74, 76–78
synthesis rates 71, 72, 78
UDP feedback inhibition 66
UTP feedback inhibition 66
Carbohydrate metabolism
actin and 297–304
during renal carcinogenesis 279–292
in preneoplastic foci 280
in oncocytes 288
mucopolysaccharidosis and 287
preneoplastic state and 291
Carbon tetrachloride perivenous liver cell necrosis 160, 162
Carboxypeptidase A (CPase A, EC 3.4.17.1) digestion of fumarase 468–470
Carboxypeptidase B (CPase B, EC 3.4.17.2) digestion of fumarase 463
Carboxyphosphamide
from activated CP 104, 109
structure 100
Carp liver fumarases 475, 476
Casein
as substrate for PK-C1 and PK-C2 412
as substrate for PK-N1 and PK-N2 409
phosphorylation polyamine stimulation 404, 405, 409
CC-1065 (NSC 298223, U 56,314) antitumor agent 141–154
adenine N-3 alkylation 144
cytotoxicity, phase specificity 141, 142
–DNA interactions 143
sites of 144
host toxicity 145
inhibition at mitosis 141, 142
isolation 141
on DNA synthesis 142
on L1210, B16 and CHO cells 142
on mouse tumors *in vivo* 145
structure 146
CC-1065 analogs antitumor activity 144–154
cell phase specificity 152, 153
DNA binding 147, 150
exposure time on survival 151, 152
liver toxicity 147
on human tumor xenografts 149
on macromolecular synthesis 150
on mouse tumors 147, 148
structures 146
CDP reductase activity *see also* Ribonucleotide reductase
adenine nucleotide derivatives on 10–15
assay 4
chymotrypsin on 8
trypsin on 6, 7
CDP reduction *see* Ribonucleotide reductase
Cell
cycle genes, stress response 496, 497, 499
differentiation
anthracycline antibiotics on 513–518
DMSO on 516
glycoprotein synthesis and 514
induction mechanisms 507–523
retinoic acid on 509, 511
therapy, leukemia model system 513–522

thiopurines on 518–522
tunicamycin on 516
proliferation regulation, topoisomerases and 439–454
replication
inhibition by 6-thioguanine-5′-phosphate 520
termination and differentiation 507
transferrin receptor in 517
Cellulases, F-actin and 301, 302, 304
Chemotherapy
adenosine deaminase inhibition and 125
by cell differentiation induction 507–523
CC 1065 and analogs 141–154
combination 134, 136, 137
cyclophosphamide 99–119
L1210 leukemia 134, 136, 137
specificity and selectivity distinction 99
thymidine kinase control and 21–32
Chicken liver
cytosol 5′-nucleotidase 182, 183 *see also* Cytosol 5′-nucleotidase
fumarase 475, 476
Chinese hamster
embryo cells, stress inducing agents and 498
fibroblasts (CHF) line 431
nalidixic acid on DNA-protein complex formation 447–451
nalidixic acid on growth and progression 445, 446
stationary cultures 441
topoisomerase I activities during cell cycle 443, 444
ovary (CHO) cell lines
CC 1065 on 141, 142
CC 1065 analogs on 147, 152, 153
(8R)3-(2-Chloro-2-deoxy-β-D-ribofuranosyl)-3,6,7,8-tetrahydroimidazo[4,5-d][1,3] diazepin-8-ol *see* 2′-Chloropentostatin
α-Chloroisocaproate
activation of BCKDH 222
inhibition of BCKDH kinase 219, 222
site specificity 232, 233
on α-ketoisovalerate oxidation rate 227
p-Chloromercuribenzoate (pCMB)
inhibition of PDH 356, 357
modification of free SH groups 349, 356
on ribonucleotide reductase 5, 7, 9, 10
2′-Chloropentostatin
in combination chemotherapy 134, 136, 137
inhibition of adenosine deaminase 125–138
kinetics of 128–130
release from 131, 137
on growth of lymphoblasts 132–135
source of 125
structure 126
Cholesterol
on HMG CoA reductase 330, 332
synthesis, rate limitation 329
Chromatin
-associated proteins phosphorylation, polyamine stimulation 405–407
condensation and interchromatin granules 430
fractionation 89
fractions, selective inhibition of acetylation 95
PC on 431
RNP organization and 429–431
unfolding, PS and 430
Chromosome structure, topoisomerase II and 445, 447
Chymase from rat mast cells 241
activation by receptor bridging 247
chemotactic factor and 251
degranulation and 245
inhibitors 244, 245
on IgG 251, 252
properties 243–245
purification 242
release from granules 248, 249
Chymostatin
on chymase and tryptase 245
on histamine release 246
Chymotrypsin
digestion of poly(ADP-ribose) synthetase 381
-like protease 241
on ribonucleotide reductase 7–9
Cisplatin on B16 cells 142
Clofibric acid
inhibition of BCKDH kinase 219, 222
on blood levels of branched chain amino acids 223
Clomiphene inhibition of protein kinase C 392
2′(3′)-CMP on cytosol 5′-nucleotidase activity 186
5′-CMP substrate for cytosol 5′-nucleotidase 182, 185, 188
5′-dCMP substrate for 5′-nucleotidase 185
CoA role in PDH complex sequence 348
Cobalt (III) hexaammine
exogenous substrate on protein kinase stimulation 404, 405
resemblance to polyamines 403
with PK-C1 and PK-C2 412
with PK-N1 and PK-N2 409, 410
Coformycin inhibition of adenosine deaminase 125, 127
kinetics of 128, 129

Collagenase, stress response and 497
Colon 26 carcinoma, CC 1065 on *in vivo* 145
Compound 48/80, histamine release and 246, 252, 253
Coumermycin
  inhibition of ligation 448
  on topoisomerase II 444, 445
CTP
  biosynthesis enzymes and antimetabolites of 67
  on cytosol 5′-nucleotidase activity 186
CTP synthetase (EC 6.3.4.2) 67
2-Cyano-3-hydroxycinnamate on 2-ketoisocaproate oxidation 207
Cycasin induction of rat renal epitheliomas 283, 287
Cycloheximide induction of stress response 491, 498
Cyclophosphamide (CP)
  activated
    binding to protein 107
    blood levels in mice 105
    pharmocokinetics of 103, 104, 108

  uric acid formation and 193–198
Cytosolic rat liver fumarases *see* Fumarases

3-Deazauridine inhibition of CTP synthetase 67
Degranulation
  mechanism 253
  proteases and 245
Dehydrogenases of α-keto acids 347–373
  citric acid cycle and 347
2′-Deoxyadenosine
  as adenine deaminase substrate 127
  potentiation of growth inhibition and 132–135
  toxicity to T-lymphoid cells 125
2′-Deoxycoformycin *see* Pentostatin
Deoxycytidine kinase deficient mutant of HL-60 519
β-2′-Deoxythioguanosine
  differentiation induction 520, 521
  on HL-60 HGPRT-cells 518
Dephosphophosvitin phosphorylation
  cobalt (III) hexaammine on 404, 405
  comparison of PK-C1 and PK-C2 412
  comparison of PK-N1 and PK-N2 409
  spermine on 403–405, 409
Dexamethasone on tyrosine aminotransferase 322
Diabetes
  induction in rats 66
  on liver synthase II
    activity 75–77
    synthesis 78–80
  phenylalanine hydroxylase and 46, 317, 321
    glucagon and norepinephrine on 318
  tyrosine amino kinase and 321
Diacylglycerol activation of protein kinase C 391
Dibutyl cAMP on phenylalanine hydroxylase phosphorylation and flux through 313, 314
Dichloroacetate
  activation of pyruvate dehydrogenase 223
  inhibition of BCKDH kinase 222

2',3'-DideoxyATP on ribonucleotide reductase 10–12
2',3'-Dideoxythymidine on ribonucleotide reductase 15–17
Diet, protein levels effect
on cytosol 5'-nucleotidase 193–198
on IMP hydrolysis 193, 194
on rat liver enzymes 223–227, 230, 234
Diethylpyrocarbonate (DEP)
inactivation of α-KgD 365, 368–370
inactivation of PDH 362–364
modification of histone residues 349
1,2-Diglyceride acetyltransferase, polyamines on 401
Dihydrolipoamide acyltransferase in BCKDH complex 219
Dihydrolipoate acetyltransferase (EC 2.3.1.12) pyruvate dehydrogenase and 219, 347–365
Dihydrolipoate dehydrogenease (EC 1.6.4.3) pyruvate dehydrogenase and 219, 347–365
Dihydro-orotase (EC 3.5.2.3)
in multienzyme complex 65, 67
UTP synthetic pathway and 66
Dihydro-orotate dehydrogenase
mitochondrial location 67
UTP synthetic pathway and 66
Dihydropteridine reductase (DHPR, EC 1.6.99.10) phenylalanine hydroxylation and 38
Dihydropterin reduction 38
Diisopropyl fluorophosphate (DFP) inhibition of chymase and tryptase 244, 245
N,N-Dimethylated dephosphophosvitin phosphorylation, polyamine stimulation 404, 405
Dimethylnitrosamine induction of rat oncocytomas 287
Dimethylsulfoxide (DMSO)
induction of differentiation 426, 433
on HL-60 516
6,7-Dimethyltetrahydropterin ($DMPH_4$), phenylalanine hydroxylase and 38, 40, 41, 45, 46
2,4-Dinitrophenol on ketoisocaproate oxidation 207
Diolein activation of protein kinase C 392
Dipyridamole inhibition of adenine deaminase 128, 129
5,5'-Dithiobis(2-nitrobenzoate) (DTNB)
inhibition of PDH 356, 357
modification of free SH-groups 349, 356
DNA
-binding domain of poly(ADP-ribose) synthetase 377, 382
-CC-1065 analogs binding 147, 150
sites 151

cytosolic 462
C-terminal sequence 470–472
chromatographic differentiation 466
elution profile 467
evidence for precursor P_2 479
N-terminal sequence 468–470
subunits composition 469
tryptic peptide mapping 472, 473
immunological similarity 465
intracellular distribution 475–477
mitochondrial 462
C-terminal sequence 471, 472
chromatographic differentiation 466
elution profile 467
N-terminal sequences 467, 468
precursor binding 479, 480
precursor import 464, 478, 479
precursor P_1 478, 479
tryptic peptide mapping 472, 473
turnover abnormalities 474, 475, 481
precursor polypeptides 477–480
P_1 and P_2 identities 477
P_1, mitochondria and 478–480
P_2-cytosol evidence 479, 480
properties 466
purification 462
mRNAs for 478–480
reaction catalyzed 461
turnover rates 472–475
Fumarases of various species
chicken heart N-terminal sequence 471
intracellular distribution 475, 476
livers 475, 476
pig heart N-terminal sequence 468, 471
rat brain 476, 477

GDP on cytosol 5′-nucleotidase activity 186
GDP reductase
activity effectors of 15
assay 4
Gene
amplification 496–498
c-fos 496, 497
collagenase 497
EPIF 497
interleukin 1 497
invariant chain 494, 496–498
metallothionein IIa 493, 494, 497
mutator 496, 497
ornithine decarboxylase 497
p53 496, 497
plasminogen activator 497
recombination functions 497
regulatory proteins and proliferation arrest 485
repair functions 497
stress responses 497, 498
XHF_1 497
Gentamicin
on PK-N1 and PK-N2 activities 413
polyamine-like property 404
β-Globin
cDNA 427
gene expression in isolated nuclei 425
mRNA transcription in MEL nuclei 433, 434
Glucagon
levels, postprandial 55, 58
on glutamine cycle 169
on HMG CoA reductase activity 332
on phenylalanine hydroxylase phosphorylation and flux through

45, 47–49, 55, 312–317, 322
insulin and 318, 319
norepinephrine and 318
role of protein phosphatase 317
spermine and 319
with isolated enzyme 315
on protein degradation 260
Gluconeogenesis, phenylalanine hydrolase and 54
Gluconeogenic enzymes in human renal carcinoma 279
Glucose-6-phosphatase (G6Pase, EC 3.1.3.9)
assay 281
histochemistry 290
in basophilic tumors 286
in human renal carcinoma 289
in oncocytic tubules 288
Glucose-6-phosphate dehydrogenase (G6PDH, EC 1.1.1.49)
assay 280
histochemistry 290
in basophilic tumors 286
in human renal carcinoma 279, 289, 290
in oncocytic tubules 288
Glucose-6-phosphate isomerase (EC 5.3.1.9)
F-actin binding 298
F-actin on 302
Glutamate
from ketoglutarate 204
metabolism and hepatocyte heterogeneity 167, 168
2-oxoisocaproate on release 167, 168
plasma membrane transport 167
Glutamate-aspartate transaminase (EC 2.6.1.1) in islets 206
Glutamate dehydrogenase (EC 1.4.1.2)
in hepatic ammonia metabolism 163
in islets
activation by BCH 205, 210
activation by L-leucine 209, 210
Glutaminase (EC 3.5.1.2)
glutamine cycling and 159
periportal
flux, ammonium, glucagon and phenylephrine on 169
flux in ureogenesis 171
flux pH on 174
location 167, 176
Glutamine
as synthase II substrate 65
hydrolysis, hepatocyte heterogeneity and 165–167
in islets
leucine metabolism and 208, 214
metabolic flux changes and 212
on insulin release 211
intercellular cycle 168–170
in hepatic pH regulation 172–176
physiological significance 170
portal ammonium concentration on flux 172
ureogenesis from ammonium and 170–172
on hepatic proteolysis 267–270, 273
synthesis, hepatocyte heterogeneity in 160–165
ammonia removal and 163–165
perivenous localization 162–164
pH on 174–176
retrograde perfusion 161
selective inhibition 162
transport system 170
Glutamine aminotransferase (EC 2.6.1.15)
distribution in liver 166
Glutamine synthetase (EC 6.3.1.2)
glutamine cycling and 159
inhibition on ammonia metabolism 162
perivenous
concentration 167, 176
flux, ammonium, glucagon and phenylephrine on 169
flux pH on 173
γ-Glutamyltranspeptidase (γ-GT, EC 2.3.2.2)
assay 282
histochemistry 290
in basophilic tumors 286
in human renal carcinoma 290
Glyceraldehyde-3-phosphate dehydrogenase (GAPDH, EC 1.2.1.12)
activation 298, 303
assay 282
F-actin binding 298
F-actin on 302
histochemistry 290
in basophilic tumors 286
in human renal carcinoma 289, 290
in oncocytic tubules 288
pH dependence 299
α-Glycerophosphate dehydrogenase, polyamines on 401
β-Glycerophosphate substrate for cytosol 5′-nucleotidase 185
Glycogen phosphorylase (Pho, EC 2.4.1.1)
assay 281
histochemistry 290
in human renal carcinoma 289, 290
in oncocytic tubules 288
Glycogen synthetase (glycogen synthase, Syn, EC 2.4.1.11)
assay 281
histochemistry 290
in human renal carcinoma 289, 290
substrate for casein kinase II 411

Glycogenosis (glycogen storage)
in human renal carcinoma 288–290
mitochondrial appearance and 285, 287
tubular during renal carcinogenesis 283, 284
Glycolytic enzymes
in human renal carcinoma 279
lactate dehydrogenase regulation of 299
Glycoprotein biosynthesis terminal differentiation and 514
Glycosaminoglycans (GAGS) retinoic acid on 511
2′,(3′)-GMP
on cytosol 5′-nucleotidase activity 186
substrate for cytosol 5′-nucleotidase 185
5′-GMP substrate for cytosol 5′-nucleotidase 182, 185, 188, 193
cGMP-dependent protein kinase (EC 2.7.1.37) substrate specificity 388
5′-dGMP substrate for cytosol 5′-nucleotidase 182, 185
GTP on cytosol 5′-nucleotidase activity 186
protection 190, 193
ara-GTP on ribonucleotide reductase 13–15
dGTP effector of ribonucleotide reductase 11, 12
Guanine nucleotide analogs effectors of ribonucleotide reductase 11–15
Guinea pig liver phenylalanine hydroxylase 60

Hamster V79 cells
protein synthesis induction
by α-irradiation 487–489, 498
by proliferation arrest 490, 498
purine-requiring mutant 490
stress inducing agents and targets 498
Heparin on protein kinases 409, 411, 414
Hepatic ammonia metabolism 159–177
Hepatocyte heterogeneity
in glutamate metabolism 167, 168
in glutamine hydrolysis 165–167
in urea and glutamine synthesis 164–166
liver anatomy and 160, 162
Hepatocytes, protein breakdown in 260
Hepatoma 20 synthase II activity 70–72
Hepatoma 3924A
adenosine deaminase
activity 127
inhibition 129
culture *in vivo* 127
multi enzyme complex from 65
PK-C2 on 411
synthase II
autonomy of activity 81
purification 65
specific activity 70–72
synthesis and degradation rates 72, 78, 80
Hepatoma 7787 synthase II activity 70–72
Hepatomas of different growth rates synthase II activities in 69–72
Hexadimethrine bromide *see* Polybrene
Hexokinase (EC 2.7.1.1) F-actin and 298
β-Hexosamidase release from mast-cell granules 248, 249
Histamine
assay in rat mast cells 242
release, protease inhibitors on 246
Histidine
on hepatic proteolysis 267–270, 273
residues of α-KgD 365–369
inactivation kinetics 368
residues for PDH activity 362–364, 368
inactivation rate constants 364
Histone
H1 removal PS and 430, 432, 435
H1(34-42) phosphorylation by protein kinase C 388
inhibition 390
H1° removal PS and 432, 435
H2B (29-35) and (29-39) phosphorylation by protein kinase C 388
Histone acetyltransferase (EC 2.3.1.48) activity
alkylating agents on 87–96
in isolated nuclei 92
Histone deacetylases butyrate and 90, 91
Histones
acetylation
in isolated nuceli 88, 92
in resistant and sensitive cells 94
N-mustard on 89–96
Na-butyrate on 90
recovery after N-mustard 93
electrophoretic analysis 88
hyperacetylated 90, 91
isolation from cultured cells 88
HMG CoA reductase (EC 1.1.1.34)
antibodies 333
assay 333
calpain II on 335, 336
degradation in hepatocytes 336
degradation *in vitro* 334
diurnal variations 332
glucagon on 332
half-life 330
insulin on 332
lysomotropic agents on 337
molecular weight 329, 339
phosphorylation sites 331

phosphorylation state and activity 329–339
regulation model 331
soluble form 336
topological model 330, 337
HMG CoA reductase kinase, phosphorylation of HMG CoA reductase and 331
HMG CoA reduction 329
Human
B-cell lymphoblast WI-L2
adenosine deaminase from 127
adenosine deaminase inhibition 129
culture 126
growth inhibition by deaminase inhibitors 132–134
breast cancer MCF-7 cells TPA on 494
erythroleukemia K562 cells β-globin RNA synthesis 434
hepatoma Hep-3B cells TPA on 494
leukemia
HL-60 cell line
anthracycline antibiotics on 513–518
deficient mutants 518, 519
differentiation induction 513, 514
DMSO on 516
protein kinase C in 391, 395, 396
retinoic acid on 514
thiopurines on 518–522
TPA on 396, 397, 516
transferrin receptor activity 515, 516
tunicamycin on 514, 516
K562 cell line
differentiation induction 513, 514
protein kinase C in 391, 396
KG1 cell line differentiation and 513
ML1 cell line differentiation and 513
ML3 cell line differentiation and 513
pentostatin chemotherapy 125
protein kinase C in 390–394
U937 cell line differentiation and 513
liver, phenylalanine hydroxylase regulation 59–61
lymphocyte EBV transformed GM4408, TPA on 494
placenta poly(ADP-ribose) synthetase from 379, 380
renal cell carcinoma
chromophobic 289
glycogenosis in 288–290
histochemical pattern 290
metabolic aberrations 279–292
mucopolysaccharidosis in 288–290
progression from preneoplastic lesion 291
renal oncocytoma characteristics 287
skin fibroblasts
new RNA species from 492
stress inducing agents 498
SV40 transformed GM637, TPA on 494
TPA on 490, 491
UV induced EPIF 495
SqCC *see* Squamous cell carcinoma
T-cell lymphoblast CCRF-CEM
culture 126
growth inhibition by deaminase inhibitors 134, 135
tumor cloning assay cytotoxicity of CC 1065 in 141
tumor xenografts U-68415 on 149
type II glycogen storage disease 285
Hybridizations
dot blot 487, 493
Northern blot 488
Hydrocortisone on SqCC/Y_1 cells 511
4-Hydroperoxycyclophosphamide (4-OH-CP) *see also* Cyclophosphamide activated
binding to protein 107
from CP 103
lifetime in blood 104
on DNA polymerase 1 114
resemblance to nucleoside phosphodiesterase 112, 115
structure 100
4-Hydroperoxydechlorocyclophosphamide
on DNA polymerase 114
structure 100
2-Hydroxyethyl thiamine pyrophosphate (2-HETPP)
inhibition of PDH 464
substrate for PDH 349, 355, 358, 361, 362
3-Hydroxy-3-methyl glutamyl coenzyme A reductase *see* HMG CoA reductase
4-Hydroxyphenylpyruvate oxidase in mammalian liver 310
Hydroxypyruvate protection of PDH 355
Hyperammonemia in liver disease 165
Hyperphenylanemia 55
Hypoxanthine-guanine phosphoribosyltransferae (HPGRT, EC 2.4.2.8)-deficient HL-60 cells thiopurines on 518

Immunoglobulin E (IgE) anti-rat 241, 242
degranulation mechanism and 253
histamine release 246, 247
mediator assay 242
mediator release 248
proteases and 245
Immunoglobulin G (IgG)
anti-rat 243

chymase on 251
on neutrophil leukocytes 251, 252
2′(3′)-IMP substrate for cytosol 5′-nucleotidase 182
5′-IMP
-hydrolyzing activity
diet on 193, 194
serum uric acid and 195
substrate for cytosol 5′-nucleotidase 182, 185, 188, 193
Inosine on cytosol 5′-nucleotidase 186
Insulin
actinomycin and 73
anti-insulin serum on CPS II 74, 75
diabetes and, on CPS II 75, 76
integrative action 73
on HMG CoA reductase activity 332
on phenylalanine hydroxylase 46, 47, 317
glucagon and 318, 319
on protein degradation 260
regulation of liver CPS II 65–82
release
B-cell and 203
glutamate dehydrogenase activation and 210, 211
leucine and 203–216
norleucine and 205
starvation and refeeding on 73, 74, 76
treatment of diabetic rats 66, 75
Interferon (γ) induction of stress response 498
Interleukin 1
relation to EPIF 495
stress response and 497, 498
5-Iodo-2′-deoxyuridine (IdUrd)
cytotoxicity enhancement 26
phosphorylation by thymidine kinase 21, 22
uptake into normal and tumor cells 25, 27
uptake measurement 23
5-Iodo-2′,5′-dideoxyuridine (5′-AIdUrd)
deinhibition of thymidine kinase 21
α-Irradiation of V79 cells protein synthesis and 488–490
Isobutyryl-CoA from valine in islets 208, 209
Isoleucine *see also* BCKDH
catabolism 219
on insulin release 211
transamination in islet homogenates 204
subcellular location 206
Isoprenaline on phenylalanine hydroxylase phosphorylation and flux through 314
ITP on cytosol 5′-nucleotidase activity 186
dITP on ribonucleotide reductase 13–15

Keratinization of SqCC/Y1 cells inhibition of 509
Keratinocytes
malignant transformation 508
retinoids on 511
4-Ketocyclophosphamide
blood levels 105
from activated CP 104, 109
structure 100
α-Ketoglutarate
on α-KgD inactivation 369
transamination to L-glutamate 204, 205, 210
α-Ketoglutarate dehydrogenase (α-KgD, EC 1.2.4.2) 365–372
active centers 367, 369, 370
arginine residues 366, 367
dissociation of 372
histidine residues 368, 369
immobilized monomer of 370–372
preparation 365
properties 366
transformations 370
α-Ketoisocaproate
in islets
catabolism pathway 209
from leucine 204–206
oxidation 207, 214
inhibition of BCKDH kinase 222, 227
on hepatic proteolysis 271–273
oxidation stimulation, diet on 228, 235
portal blood levels on BCKDH 229, 235
stimulation of BCKDH 227–229
α-Ketoisovalerate
decarboxylation, diet dependence 227, 235
inhibition of BCKDH kinase 222
on α-ketoisocaproate accumulation 207
stimulation of BCKDH 227–229
α-Keto-β-methylvalerate
inhibition of BCKDH kinase 222
oxidation stimulation, diet on 228
stimulation of BCKDH 228, 229

Lactate dehydrogenase (EC 1.1.1.27)
F-actin
binding 298, 300, 301
complex 299–301, 303
inhibition 302
pH on 300
substrates 300
Lactate on hepatic proteolysis 270
Leucine *see also* BCKDH
catabolism 219
hepatic proteolysis and 267–273

metabolism in pancreatic islets 203–216
activation of glutamate dehydrogenase 209, 212
end products 209
of exogenous nutrients 212
on asparagine 214
on CO_2 production 212, 213
on distal secretory events 215
on glutamine 214
on NH_4 concentration 211, 215
on O_2 consumption 213, 214
oxidation, L-glutamine on 208
transamination to α-ketoisocaproate 204–206, 211, 212
transport into cells 203, 204
Leukemia *see* Human *and* Mouse
Leupeptin
on chymase and tryptase 245
on histamine release 246
Lipid storage in rat renal carcinoma 285
Lysolecithin stimulation of phenylalanine hydroxylase 40, 61
Lysosomal pathway of intracellular proteolysis in liver 257–274
protein pools on 266
Lysosomes degradable protein in 264–267
Lysosomotropic agents on HMG CoA reductase 337

Macroautophagy in rat liver 257–274
amino acids on 262
leucine inhibition 271
stimulation 261, 266
Magnesium ion requirement for cytosol 5′-nucleotidase 185, 190–192
Maple syrup urine disease BCKDH and 225
Marcellomycin
differentiation induction in HL-60 514, 516
on transferrin receptor activity 515
Maytansine on L1210 cells 142
Metallothionein IIa gene
regulation 495
stress response and 497
TPA induction 493, 494
Methionine on hepatic proteolysis 267–270, 273
Methionine sulfoximine inhibition of glutamine synthetase 162
Methotrexate on thymidine uptake stimulation 31
Methyl-bis-(2-chloroethyl)amine (N-mustard, HN2)
on histone acetylation 87–96
in Ehrlich ascites cells 89, 94
in Ehrlich ascites nuclei 92
in Walker carcinoma cells 94
resistant and sensitive cell lines 94
Methylene-dTTP on ribonucleotide reductase 15–17
Methylnitrosourea carcinogenesis 500
6-Methyltetrahydropterin ($6MPH_4$)
phenylalanine hydroxylase and 38, 40, 41, 44, 46, 60
Mevalonate
from HMG CoA 329
on HMG CoA reductase 332, 337
Mezerein activation of protein kinase C 392
Microautophagy in rat liver 257
adaptive regulation 273
dense body marker 262
particle formation 261
Microsomal mixed function oxidase (EC 1.14.14.1) on CP 103
Mitochondrial
abnormalities in renal tumors 287, 288
fumarases *see* Fumarases
oxidation of α-ketoisocaproate 207
Mitomycin C
coordinate regulation by 493
induction of stress response 498
on human fibroblast protein synthesis 490
Monkey liver phenylalanine hydroxylase 60

morphology 435
phospholipids on 433–435
L cells UV induction of EPIF 495
L1210 leukemia
CC 1065 on 141, 142, 145
CC 1065 analogs on 147
chemotherapy, adenosine deaminase and 134, 136, 137
culture *in vivo* 126
leukemia cell lines
M1 513
differentiation induction 514
R453 513
WEH1 3BD⁻ 513
differentiation induction 514
liver fumarase 475, 476
M5076 tumor U-68415 on 148
mammary carcinoma CD8F1, CC 1065 on 145
mastocytoma P815 102

DNA polymerase/3'-5'-exonuclease in 116
melanoma B16
CC 1065 on 141, 142, 145
U 68415 on 148
P388 tumor
CC 1065 on 145
CC 1065 analogs on 147
testis poly(ADP-ribose) synthetase from 380
Mucopolysaccharidosis (mucopolysaccharide storage)
in human renal cell carcinoma 288–290
tubular during renal carcinogenesis 285–287
Mutator function as stress response 496, 497
Myelin basic protein (MBP)
amino acid sequence (104–123) 388
fragments, phosphorylation 388, 389
peptides, alanine analogs 388
protein kinase C inhibition 390, 391, 394
protein kinase C phosphorylation sites 388, 389
Myosin from non-muscle cells 297
Myosin light-chain kinase (calmodulin/Ca^{2+}-dependent protein kinase, EC 2.7.1.37)
alanine MBP peptide on 391
inhibition by tamoxifen 394
substrate specificity 388
Myxomycete plasmodium actinomycin from 297

NAD
binding to poly(ADP-ribose) synthetase 381
role in PDH complex sequence 348
NADH substrate for lactate dehydrogenase 300, 301
N-mustard *see* Methyl-bis-(2-chloroethyl) amine
Na-butyrate on histone deacetylation 91
Nafoxidine inhibition of protein kinase C 392
Nalidixic acid
induced DNA-strand breaks 449–453
on cell kinetics 444–447
on DNA-protein complex formation 447, 449
on topoisomerase II 445
Meomycin
on PK-N1 and PK-N2 activities 413
polyamine-like property 404
Neurotransmitter synthesis, amino acid concentrations and 309
Neutrophil leukocytes
chemotactic factor and chymase 251, 252
chemotaxis assay 243
IgC products on 251, 252
Nitella flexilis actomyosin from 297
Nitrosamine induction of rat renal epitheliomas 283
N-Nitrosomorpholine (NNM)
epithelial kidney tumor induction 280–284
hepatocarcinogenesis in rats 280, 291, 292
induction of oncocytomas 288
Non-heme subunit of ribonucleotide reductase
inactivation 5–9
sulfhydryl reagents on 7–10
Norepinephrine on phenylalanine hydroxylase phosphorylation and flux through 313–316
antagonistic effects 315
glucagon and 318
Norleucine
on insulin release 205; 211
transamination in islet homogenates 204, 205
Norvaline
on insulin release 211
transamination in islet homogenates 204, 205
Novobiotin
induced DNA breaks 454
inhibition of ligation 448
on topoisomerase II 444, 445
dNTPs on ribonucleotide reductase 3
Nuclear matrix
phospholipids on 431
structure and RNA processing 436
Nuclear protein kinases *see* Protein kinases
Nuclear proteins *see* Proteins
Nucleolar organizer region protein B23 and 432
5'-Nucleotidase (EC 3.1.3.5) *see also* Cytosol 5'-nucleotidase
from rat and hepatoma tissues 181
5'(3')-Nucleotidase (EC 3.1.3.31) source and characteristics 181

Octadecyl-2-methyl-*sn*-glycero-3-phosphocholine *see* Alkyl lysophospholipid
Octanoate
inhibition of BCKDH kinase 222
on hepatic proteolysis 271
Oncocytosis, tubular during oncocytoma development 287, 288
Oncogene

c-fos induction 495–498
v-erb B, EGFR similarity 512
Ornithine aminotransferase (EC 2.6.1.13)
precursor polypeptide identification 477
purification from rat liver 463
Ornithine decarboxylase (EC 4.1.1.17) stress response and 497
Orotate phosphoribosyltransferase (EC 2.4.2.10, OPRT) UTP synthetic pathway and 66
Orotidine 5'-monophosphate decarboxylase (EC 4.1.1.2, OMPDC) UTP synthetic pathways and 66
2-Oxoisocaproate on glutamate release from liver 167, 168
Oxolinic acid
inhibition of ligation 448
on topoisomerase II 445

Pancreas phenylalanine hydroxylase regulation and 56, 57
Pancreatic islets, branched chain amino and keto acid metabolism in 203–216
glutamate dehydrogenase activation and 210
transaminations in 204, 205
Papain digestion of poly(ADP-ribose) synthetase 381
2,4-Pentanedione modification of α-KgD 365
Pentose phosphate pathway renal carcinogenesis and 279, 280, 291
Pentostatin (2'-deoxycoformycin)
in combination chemotherapy 134, 136, 137
inhibition of adenosine deaminase 125
biphasic 129, 130,137
kinetics of 128, 129
release from 130–132, 137
on growth of lymphoblasts 132–135
Pepstatin on chymase and tryptase 245
Phenylalanine
catabolism control coefficients 322
hydroxylating system 38
levels, physiological significance 55
metabolism control by phosphorylation mechanisms 309–324
hormonal stress on 321
long-term control 320
nutritional stress on 321
pathways in liver 310
on hepatic proteolysis 267, 268, 273
on hydroxylase 41, 48–54
oxidation 37
transport inhibition 321
Phenylalanine hydroxylase (EC 1.14.16.1) regulation 37–61, 309–324
activation 40, 41, 45, 60
mechanism 52
phosphorylation and 312, 313
adrenergic agents on 313–316
alternative forms 51–53, 310
BH_4 and phenylalanine levels on 48, 49
cofactor BH_4 37
control mechanisms 323
dephosphorylation 44
diabetes and 317, 318
diet, response to 56–58
flux through 311, 313
from different species 60
glucagon on 45, 47–49, 56, 57
human liver 59
immunoprecipitation 311
in diabetic rats 46
in mammalian liver 310
insulin on 317, 318
norepinephrine on 313–318
phosphorylation
glucagon on 312–319, 322
identity of sites 320
in liver cells 315, 316
in vitro 41–43, 50, 315
in vivo 45–47, 53, 54, 59
inhibition by tetrahydropterins 50
physiological significance 54–58, 61
polyamines and 319
polymeric forms 39
properties 39–43
reaction catalyzed 309
spermine and 319
stimulation conditions 268
tyrosine supply and 309
vasopressin and 313
Phenylalanine hydroxylase phosphatase 43–45, 52
Phenylalanine 4-monooxygenase *see* Phenylalanine hydroxylase
Phenylalanine transaminase in mammalian liver 310
Phenylephrine
on glutamine cycle 169
on phenylalanine hydroxylase 314
Phenylglyoxal
inactivation of PDH 354, 355
modification of arginine residues 349
Phenylketonuria 37, 55, 223
Phenyl phosphate substrate for cytosol 5'-nucleotidase 182, 185
Phenylpyruvate
accumulation in phenylketonuria 223
in islets
on content of amino acids 205, 214
on ketoisocaproate accumulation 207, 214

on valine metabolism 208
inhibition of BCKDH kinase 219, 222
Phorbol esters on protein kinase C 392, 396, 397
Phosphate, inorganic (Pi) inhibition of cytosol 5′-nucleotidase 187, 188
ATP on 188–200
Phosphatidylcholine (PC)
on chromatin condensation 431
on MEL nuclei morphology 435
on RNA processing 429
on RNA synthesis in MEL nuclei 433
Phosphatidylserine (PS)
-activated phosphorylation of nuclear proteins 435
chromatin unfolding and 430
on β-globin gene expression 434
on MEL nuclei morphology 435
on nuclear proteins 432
on RNA processing 429
on RNA synthesis in MEL nuclei 433, 434
6-Phosphofructokinase (EC 2.7.1.11)
activation 298
–F-actin binding 298
F-actin on 302
Phosphoglycerate kinase (EC 2.7.2.3) F-actin and 298, 302
Phosphoglyceromutase (EC 2.7.5.3) F-actin and 298, 302
Phospholipase A_2 activation by TPA 499
Phospholipid/calcium-dependent protein kinase *see* Protein kinase C
Phospholipid stimulation of phenylalanine hydroxylase 40
Phospholipids on transcription 425–436
on MEL nuclei 433–435
on rat liver nuclei 429
N-(Phosphonacetyl)-L-aspartate (PALA) inhibition of ATCase 67
Phosphoprotein phosphatase activation of BCKDH 223
Phosphoramide mustard (PAM)
cytotoxicity of CP and 104
from 4-OH-CP 110
inhibition of DNA polymerase 1 113, 114
site-specific DNA alkylation 115
structure 100
Phosphoramidon on chymase and tryptase 245
Phosphorylase (EC 2.4.1.1) F-actin on 302
Phosphorylase kinase (EC 2.7.1.38)
activation 298
F-actin on 302
Phosphorylation
–dephosphorylation regulation of phenylalanine hydroxylase 54–61
glucagon on 45
interconvertible enzymes and 338
ligands on 50–54
of HMG CoA reductase 331
activity and 335
calpain and 335, 336
of phenylalanine hydroxylase *in vitro* 41–43
of phenylalanine hydroxylase *in vivo* 45–47
of proteins TPA on 491
-stimulated degradation 336, 338
Phosvitin
as substrate for PK-C1 and PK-C2 412
as substrate for PK-N1 and PK-N2 409
phosphorylation, polyamine stimulation 404, 405, 407
Pig liver cytosol 5′-nucleotidase 182
Plasmid
pBR 322
DNA topoisomerase 1 on 443, 444
in construction of cDNA libraries 487, 492
pNV-18 DNA, topoisomerase 1 on 444
Plasminogen activator, stress response and 497
Poly(A)polymerase (EC 2.7.7.19) as substrate for polyamine-stimulable protein kinase 406
Poly(ADP-ribose) structure 378
Poly(ADP-ribose) synthetase
accurate transcription initiation and 382
activity from various mouse organs 379
automodification site 381–383
calf 380
DNA binding domain 377, 382
domain structure and function 377–383
fragment sizes 381
human 380
human placenta 379
interspecies cross reactivity 380, 381
limited proteolysis 381
mouse 380
NAD binding domain 381
on RNA polymerase 382
purification 378
Polyamine stimulation of protein kinase reactions 401–417
chromatin and non-histone protein associated 402–408
mechanisms 413–416
physiological significance 416, 417
protein substrate on 404, 414, 415
substrate dependence 408
Polyamines
Mg^{2+} requirements and 403, 410, 414

on cytoplasmic protein kinases 411, 412
on non-histone protein phosphorylation 405–407
on nuclear protein phosphatases 407
on phenylalanine hydroxylase phosphorylation 319
on PK-C1 and PK-C2 411–413
on PK-N1 and PK-N2 409–413
specificity 403
Polybrene (hexadimethrine bromide) on dephosphophosvitin phosphorylation 404
Polylysine on protein kinase activity 413
Porphyrin biosynthesis succinic thiokinase and 372, 373
Proliferation-monitoring system 486
Proline
metabolism in liver, periportal localization 167
on hepatic proteolysis 267–270, 273
Pronase E digestion of fumarase 468
Protease
cytosolic, Ca^{2+}-dependent 334
on TPA-induced protein synthesis 491
treatment of ribonucleotide reductase 4
Protein
-associated DNA breaks
drugs inducing 447, 448
topoisomerase catalyzed 440, 447
degradation
amino acid concentration on 260, 263, 270
autophagic activity and 257
hormones on 260
in lysosomes 264–267
measurement of 258, 260
dietary deficiency on BCKDH 223–227
dietary levels in chicken
on IMP hydrolysis 193, 194
on uric acid formation 195–198
levels in growth-arrested cells 488
phosphorylation TPA on 491
synthesis, cell proliferation and 490
synthesis induced by α-irradiation 488, 489
turnover
degradation rates and 263
under basal conditions 264
Protein kinase C (ATP: protein phosphotransferase, EC 2.7.1.37)
activation
by diacylglycerol 391
by diolein 392
by mezerein 392
by TPA 392, 393, 491, 499, 513, 516
antibodies to 394, 395
bioregulation and 387–397
histone phosphorylation 388
immunocytochemical localization 395
in leukemic cells 390, 391
in rat brain 395, 396
inhibition
by ALP 391–394
by antineoplastic agents 394
by antiestrogens 392, 393
by MBP fragment analogs 390
localization in leukemia cells 396
molecular species immunoblot assay 395
phosphorylation sites on MBP 388–390
replacement for reductase kinase 331
substrates
MBP fragments 389
proteins 388, 391
synthetic peptides 388
translocation by TPA 396, 397
Protein kinase reactions, polyamine stimulation 401–417
chromatin and non-histone associated 402–408
endogenous protein substrate on 405
exogenous protein substrate on 404
spermine on phosphorylation 403
mechanisms 413–416
physiological significance 416, 417
Protein kinases
amino glycoside antibiotics on 412, 413
androgen action and 406
cytoplasmic
from various sources 410, 411
PK-C1 and PK-C2 411, 413
effector-dependent polyamines on 411
messenger independent 402, 411, 413
Mg^{2+} requirements 414
nuclear PK-N1 and PK-N2
pH on 410
purification and properties 408
stimulation, various substrates and 409
temperature on 410
polylysine on 413
topoisomerases and 453, 454
Protein phosphatases (EC 3.1.3.-)
dephosphorylation of phenylalanine hydroxylase 319, 323
in regulation of HMG CoA reductase 331
polyamines on 407
Proteins
cycloheximide induced 491, 498
heat shock factor 497
non-histone
HMG 14 and HMG 17 phosphorylation 406, 415

phosphorylation, polyamine stimulation 405–407
spermine-binding 404
nuclear
MEL 427, 428, 435
rat liver 427, 428, 432
TPA induced
d-g 491, 498
XHF_1 491, 493, 495, 497, 498
UV induced EPIF 495, 497, 498, 500
Proteolysis hepatic, amino acid control of 257–274
in particulate fraction 264, 265
lysosomal protein pools and 266
specificity for suppression 267–273
Prothrombin
activation 249–251
-thrombin conversion assay 242
Purine nucleoside phosphorylase (PNP, EC 2.4.2.1)
in chicken liver, diet on 195–197
on thiopurine nucleosides 519
Purine nucleotide metabolism, cytosol 5'-nucleotidase in 181–199
Puromycin-resistant histone acetylation 89
Putrescine 401
on protein kinase stimulation 403
Pyrazofurin inhibition of OMPDC 67
Pyrimidine nucleotide biosynthesis 65–67
Pyrromycin (PYM)
differentiation induction in WEH1 3BD- 514
on HL-60 516
on transferrin receptor activity 515
Pyruvate
as substrate for PDH 348, 358, 362–364
inactivation of PDH 359, 360, 362, 364
on hepatic proteolysis 270
protection of PDH 355
Pyruvate dehydrogenase (pyruvate: lipoate oxidoreductase, PDH, EC 1.2.4.1) 347–365
activation in islets 214
active centers 350
and arginine 352–356
activity and tryptophan residues 352
assay 349
circular dichroism spectra 350, 351
essential histidine residues 362–364
essential SH-groups 356–362
inactivation
by 2,3-butanedione 353, 356
by pCMB 356, 357
by DEP 362–364
by DTNB 356–358
by phenylglyoxal 354, 355
by substrate 359, 360, 362
pH dependence 362
intramolecular oxidation of 2HETPP 361
liberation of bound substrate 360
localization of tryptophan residues 350–352
Pyruvate dehydrogenase complex (EC 1.2.4.1 + EC 2.3.1.12 + EC 1.6.4.3) 219
activation 223
assay 223
BCKDH on 229, 230, 234
mechanism 347
properties 349
reaction sequence 348
reconstituted 349, 364
SH-groups 358, 359
Pyruvate dehydrogenase kinase (EC 2.7.1.99) 219
Pyruvate dehydrogenase phosphatase (EC 3.1.3.43) 219
Pyruvate kinase (EC 2.7.1.40)
F-actin binding 298
F-actin on 302
phosphorylation inactivation and 338

Rabbit
heart BCKDH from 230
kidney BCKDH from 230
liver BCKDH from 230
liver fumarase 475, 476
Rat
brain fumarase subcellular distribution 476, 477
brain protein kinase C
age related changes 395, 396
immunoblot detection 395
heart BCKDH from 230
hepatoma *see* Hepatoma
intestine adenosine deaminase 127, 139
kidney phenylalanine hydroxylase 61
liver
adenosine deaminase 127, 129
amino acid deficiency on 259
ammonia metabolism 159–177
cytosol 5'-nucleotidase 182
allosterism 193
bivalent metal ions on 191
molecular weight 184
physiological function 193
fumarases 461–481
hepatocytes
BCKDH flux regulation 227
isolation 220
HMG CoA reductase, diurnal variations 332
macroautophagy, intracellular

proteolysis and 257–274
microsomes separation 333
nuclei
release of transcripts 427
RNA processing in 429, 432
perfusion
antegrade and retrograde on metabolism 161, 162
procedure 160, 258
phenylalanine and tyrosine metabolism in 309–324
phenylalanine hydroxylase 37, 60
phenylalanine hydroxylase phosphatase 43
PK-C1 and PK-C2 412
synthase II *see* CPS II
mammary tumors MNU induction 500
mast cells
degranulation 245, 253
metalloendoprotease in 247
preparation 242
release of mediators from 248, 249
serine proteases in 241–254
renal carcinogenesis 279–292
renal epitheliomas
basophilic 285, 286, 292
cellular metamorphosis and 284
classification 282
chromophobic 285, 292
mucopolysaccharidosis and 285–287
progression from preneoplastic lesion 291
sequence of development 283, 285
renal oncocytoma 283
tubular oncocytosis and 287, 292
ventral prostate, spermine-binding protein phosphorylation 404–406
Retinoic acid
inhibition of cell maturation 509
on HL-60 514
on SqCC/Y_1 509, 511
on various squamous cell carcinomas 510, 511
Ribonucleoprotein processing in isolated nuclei 425–436
chromatin and organization 429–431
Ribonucleotide reductase (EC 1.17.4.1) 3–17
assay 4
ATP analogs on 10–13
deoxythymidine nucleotides on 15–17
effector binding specificity 10
effector binding subunit
ATP protection 7, 9
chymotrypsin on 7–9
inactivation 5–10
trypsin on 5–7
GTP analogs on 10–13
non-heme iron subunit
chymotrypsin on 7, 8
pCMB on 7, 9, 10
from various sources 5
NEM on 7, 9, 10
trypsin on 5, 6, 9
preparation 4
proteases on 4, 5
reaction catalyzed 3
subunits separation 4
sulfhydryl reagents on 5, 7, 9
Ribose 5'-phosphate substrate for cytosol 5'-nucleotides 185
RNA
processing in rat liver nuclei
interchromatin granules and 430
phospholipids on 429, 432
species, TPA induced 492
synthesis
poly(ADP-ribosyl)ation of RNA polymerases and 382
in MEL nuclei
Hg transcript measurement 434
phospholipids on 433
mRNAs for rat liver fumarases 478–480
RNA polymerase II (EC 2.7.7.6)
accurate transcription initiation by 382
poly(ADP-ribosyl)ation 382, 383
RNA polymerases
as substrate for polyamine-stimulable protein kinase 406
in MEL cells
α-amantin on 434
PS-treated nuclei and 432

Sarcoma S180 CP on 102, 110, 111
Selenium dioxide inhibition of protein kinase C 394
Serine phosphorylation site for protein kinase C 389, 390
Serine proteases *see also* Tryptase *and* Chymase
in rat mast cell granules 241–254
atypical 243, 244
properties 243–245
SH-groups of PDH 356–362
essential 358, 360, 361
Snake liver fumarase 475, 476
Sodium dodecyl sulfate (SDS)
demonstration of DNA breaks 447, 448
Soybean trypsin inhibitor on chymase and tryptase
Bowman-Bink 245
Kunitz 244, 245

Spermidine *see also* Polyamines, stimulation of various enzymes 401, 402
Spermine *see also* Polyamines
-binding protein
phosphorylation stimulation 404, 405
substrate for casein kinase II 411
on circular dichroism of PK substrates 415
on cytoplasmic protein kinases 411
on nuclear protein kinases 408, 409
on phenylalanine hydroxylase phosphorylation 319
on protein kinase activity 404, 405
on protein phosphatases 407
on dephosphophosvitin phosphorylation 403, 405
stimulation of various enzymes 401, 402
Sporotrichum dimorphosporum endogluconase activation 301
Spot hybridization
assay 427
of MEL RNA 434
Squamous cell carcinoma
model of abnormal maturation 508
phenotypes, table of 510

EGF on 509, 510
hydrocortisone on 511
retinoic acid on 509, 511
Streptomyces zelensis CC 1065 from 141
Streptomycin
on PK-N1 and PK-N2 activities 413
polyamine-like property 404
Streptozotocin induction of epithelial kidney tumors 281, 292
Stress, genetic response 485–501
cancerogenesis and 499, 500
cycloheximide induction 491, 498
inducible genes 494, 498
monitoring 498, 499
requirements of system 485
Succinate dehydrogenase (SDH, EC 1.3.99.1)
assay 282
in basophilic tumors 286
in oncocytic tubules 288
Succinic thiokinase (EC 6.2.1.5) reaction direction and products 372, 373
4-(s-cysteine)-Sulfido-cyclophosphamide
structure 100
transmercaptalization and 106
4-(s-ethanol)-Sulfido-cyclophosphamide
hydrolysis 106
on S180 110, 111
structure 100
4-(s-protein)-Sulfido-cyclophosphamide
blood levels 105
from 4-OH-CP 108
structure 100
4-Sulfonatoethyl-thiocyclophosphamide (ASTA Z7557) on histone acetylation 95
SV40 sequencs amplification of 496, 498
Synthase II *see* Carbamoyl-phosphate synthase II

Tamoxifen inhibition of protein kinase C 392, 394
12-O-Tetradecanoylphorbol-13-acetate (TPA)
activation of protein kinase C 392
coordinate regulation by 493
differentiation induction 508
enzyme activation 499
inhibition of EGF binding 513
on protein synthesis 490, 491
on transferrin receptor 516, 517
stress induction 498
translocation of protein kinase C 392
Tetrahydrobiopterin (BH_4)
diastereoisomers of 50
on phenylalanine hydroxylase activity 40, 42, 48, 49, 57, 60
on phenylalanine hydroxylase phosphorylation 50–54, 323
structure 37, 38
synthetic analogs 38, 40
Thiamine pyrophosphate (TPP) interaction with PDH 349–352
6-Thioguanine on HL-60 $HGPRT^-$ cells 518–522
cytotoxicity 520
hypoxanthine on 521, 522
differentiation induction 518–522
membrane target evidence 522
metabolic forms and mode of action 521
6-Thioguanosine
differentiation induction 519, 521
on HL-60 $HGPRT^-$ cells 519, 521
Thiols stabilization of activated CP 104–108
Thymidine
analogs phosphorylated by kinase 21
uptake by cells 5'-AdThd stimulated 31
Thymidine kinase (EC 2.7.1.21)
5'-AdThd on 27–29
feedback inhibitors 21
purification and assay 24
regulation, perturbation of 21–32
Tight-binding enzyme inhibitors 127–132
5'-dTMP substrate for cytosol 5'-nucleotidase 185
Topoisomerase I
activity in stimulated cell cultures 442–444

in neoplastic cells 440
isolation and purification 442
relaxation of DNA 443, 444
single-strand break formation 439
substrate specificity 443
Topoisomerase II
antineoplastic agents and 440
chromosomal DNA replication and 445, 447
DNA cleavage mechanism 447, 448
double-strand break formation 440, 449
from various sources 440
nalidixic acid on 445, 448
Topoisomerases, cell proliferation and 439–454
assay 441
DNA functions and 439
DNA transformation catalyzed 440
gene regulation and 449, 451, 454
in stimulated cells 444
phosphorylation of 450, 454
Toxicogenation of activated CP
activities of exonucleases 112, 113
assay 102
DNA polymerase 1 inhibition and 114
pharmacokinetics 103, 104
possible mechanism 109–111
Transamination in islet homogenates 205, 206
Transferrin receptor
anthracycline antibiotics on 515, 516
differentiation inducers on 514, 515
DMSO on 516

2′(3′)-UMP on cytosol 5′-nucleotidase activity 186
5′-UMP substrate for cytosol 5′-nucleotidase 182, 185, 188
5′-dUMP substrate for cytosol 5′-nucleotidase 185

UMP kinase (nucleosidemonophosphate kinase, EC 2.7.4.4) UTP synthetic pathway and 66
Urea synthesis
  bicarbonate removal and 173
  from ammonium, glutamine on 170–172
  glutamate withdrawal on 167
  pH on 174
  hepatocyte heterogeneity in 160–165
  in antegrade perfusion 161
  periportal localization 162, 167, 176
Uric acid formation, diet on enzymes in 195–198
Uridine on cytosol 5′-nucleotidase 186
Urothelial cells, human
  cell doubling time 27
  culture 22
  IdUrd cytotoxicity 5′-AdThd on 26
  IdUrd uptake 5′-AdThd on 25, 27
  dTTP pool 31
UTP
  biosynthesis, enzymes of 66
  on cytosol 5′-nucleotidase activity 186
UV irradiation
  of human fibroblasts
    coordinate regulation by 493
    induction of external protein inducing factor (EPIF) 495
    induction of stress response 498
    protein synthesis and 490
  of V79 cells and protein synthesis 490
UV repair deficiency 499

Vacuole appearance in perfused livers 261
  amino acid addition on 261–263
Valine *see also* BCKDH
  catabolism 219
  on insulin release 211
  release from liver protein degradation 260, 265, 266
  transamination in islet homogenates 204–206, 211, 212
Vasopressin on phenylalanine hydroxylase 313
Vidarabine *see* Arabinosyladenine

ω-Amidase (EC 3.5.1.3) distribution in liver 166
Walker carcinoma cells, N-mustard
  on histone acetylation 94
  resistant and sensitive lines 87, 94

Xanthine dehydrogenase (EC 1.2.1.37) in chicken liver, diet on 195–197
Xanthosine 5′-monophosphate substrate for cytosol 5′-nucleotidase 185
X-ray induction
  of rat renal tumors 283
  of stress response 498
